PROFILE

Backend-focused Full Stack Developer with 7 years of experience building revenue-critical SaaS products, marketplaces, ERP systems, delivery platforms, booking systems, dashboards, and automation tools. Strong backend engineering background with Node.js, NestJS, Python, FastAPI, Laravel, PostgreSQL, MySQL, MongoDB, and Redis, supported by modern frontend delivery in React, Next.js, TypeScript, and clean admin/customer interfaces. Led 100+ company projects and completed 300+ freelance projects for international clients across Europe, North America, the Middle East, and Australia.

IMPACT SNAPSHOT

7+ years full stack experience	100+ company projects led	300+ freelance engagements
€237K+ Riderem year-one revenue	800K+ AUD JJ Deliveries business volume	115K+ CHF Pikup year-one revenue

CORE TECH STACK

Backend: Node.js, NestJS, Express.js, Python, FastAPI, Django, Laravel, PHP	Frontend: React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, Bootstrap, HTML5, CSS3
Databases: PostgreSQL, MySQL, MongoDB, Redis, Supabase, Firebase	Architecture: REST APIs, GraphQL, multi-tenant SaaS, RBAC, modular monoliths, microservices
DevOps: Docker, Linux, Nginx, CI/CD, GitHub Actions, AWS/VPS deployments	AI and Automation: OpenAI APIs, chatbots, OCR flows, workflow automation, API integrations

KEY HIGHLIGHTS

- Delivered revenue-generating production systems, including Riderem generating €237,688+ in one year across 9,078+ orders, JJ Deliveries crossing 800K+ AUD in business volume, and Pickup reaching 115.16K+ CHF year-one revenue.
- Led architecture and technical delivery on 100+ company projects across SaaS, ERP, marketplaces, booking platforms, delivery systems, dashboards, and business automation products.
- Completed 300+ freelance engagements through Fiverr and direct contracts for international clients across Italy, Germany, USA, Canada, UAE, Switzerland, France, Australia, and other European markets.
- Built scalable backend systems with secure authentication, RBAC, multi-vendor and multi-tenant workflows, payment flows, real-time notifications, queues, reporting dashboards, and third-party integrations.
- Delivered both backend and frontend for admin panels, customer portals, dashboards, API-connected business tools, and responsive React/Next.js interfaces.

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer and Tech Lead

Dcodax Technologies | Remote | 2021 - Present

- Lead architecture and delivery for SaaS, ERP, marketplace, delivery, booking, dashboard, and business automation projects.
- Build production systems using Node.js, NestJS, Python, Laravel, React, Next.js, TypeScript, PostgreSQL, MySQL, MongoDB, Redis, and cloud/VPS deployments.
- Own backend design for APIs, authentication, RBAC, subscriptions, reporting dashboards, queues, real-time notifications, payment flows, and third-party integrations.
- Act as the technical lead for international client work, coordinating architecture, integrations, deployments, and delivery across design, QA, backend, frontend, and product teams.

Freelance Full Stack Developer

Fiverr and Direct Clients | Remote | 2019 - Present

- Completed 300+ freelance projects covering full-stack web platforms, admin portals, APIs, automation tools, e-commerce systems, dashboards, and custom business applications.
- Worked directly with international clients from requirement gathering and technical scoping to deployment, maintenance, bug fixing, performance improvements, and long-term feature development.
- Specialized in backend-heavy projects with Node.js, Python, Laravel, SQL/NoSQL databases, API integrations, payments, notifications, and secure admin/customer workflows.

Full Stack Developer

Alestra Solutions | Remote | 2021 - 2023

- Developed backend APIs, admin dashboards, business portals, and customer-facing web applications using Node.js, Laravel, React, JavaScript, MySQL, and cloud deployments.
- Improved backend reliability through clean API structure, optimized database queries, reusable modules, validation layers, and secure authentication flows.
- Translated business requirements into maintainable frontend/backend features in collaboration with design, QA, and client teams.

BACKEND AND FRONTEND STRENGTHS

- Backend leadership: database design, API architecture, authentication, RBAC, integrations, payment flows, reporting, performance optimization, and production deployments.
- Frontend delivery: responsive React/Next.js dashboards, admin panels, customer portals, forms, tables, charts, and clean business-facing interfaces.
- Client-facing execution: requirement gathering, technical planning, estimation, delivery ownership, team coordination, async communication, and long-term maintenance for international products.

PORTFOLIO

Riderem, Multi-Vendor Food Delivery System

Italy | Laravel backend, Node.js/Python integrations, web admin dashboards, payments, vendor/rider modules

Built a multi-restaurant food delivery ecosystem covering admin, vendor, rider, customer, order, payment, and reporting workflows. The platform generated €237,688+ revenue in one year, including €34,424.9 admin revenue, €180,142 local vendor revenue, €23,143.2 rider revenue, and 9,078+ completed orders.

JJ Deliveries, Delivery and Logistics Platform

Australia | Backend APIs, dashboards, dispatch workflows, reporting, integrations

Delivered a scalable delivery platform for order handling, dispatch, operations tracking, and business reporting. The system crossed 800K+ AUD in business volume, proving reliability under real commercial usage.

Pikup, Third-Party Delivery Aggregation Platform

Switzerland and France | Node.js/Python/Laravel APIs, partner integrations, admin systems

Built a flexible aggregation platform integrating third-party delivery services such as UberEats, Padello, and Stuart while supporting rapid go-to-market execution. The platform reached 115.16K+ CHF revenue in one year.

Hoheal, Multi-Tenant Hotel Management System

Germany | SaaS architecture, multi-tenant backend, dashboards, automation

Developed a hotel management SaaS with property operations, user roles, booking/management flows, and tenant-level data separation. Focused on maintainable backend architecture, secure access control, and workflow automation.

Rydstop, Bid-Based Ridesharing Platform

Canada | Real-time backend, pricing engine, driver matching, notifications

Developed an InDrive-style ridesharing system with bid-based pricing, live GPS workflows, driver matching, ride lifecycle management, and real-time notifications. Owned backend logic, admin operations, and service architecture.

WeCare, Multi-Vendor E-Commerce Marketplace

Dubai | Marketplace backend, vendor management, product catalogues, responsive web flows

Created a multi-vendor e-commerce platform where businesses can manage digital, fashion, sports, home, health, beauty, and other store categories in one place. Built vendor management, product catalogues, ordering flows, and responsive customer/vendor experiences.

ERP, Business Automation and AI Systems

Global clients | Python, Node.js, APIs, dashboards, AI integrations

Built ERP modules, workflow automation flows, reporting dashboards, AI-assisted tools, chatbots, OCR/document automation, and third-party integrations for companies that needed faster daily operations and cleaner decision-making.

Additional work includes Get Out There UAE, Blushr, Formula 1 Digital Race Programme, booking platforms, admin dashboards, marketplace systems, OCR tools, chatbot flows, and custom business automation products for international clients.

EDUCATION

Bachelor of Software Engineering, COMSATS University Islamabad | Graduated 2021
